SUMMARY

Software Engineering student with microinternship experience delivering performance improvements in IDE tooling and web caching. Demonstrated ability to accelerate Eclipse PDE builds by 20% and boost Utopia PHP Cache response times by 25%. Proficient in Python, C++, PHP, and frameworks such as Flask and Laravel Pint. Seeking to apply strong development and optimization skills to contribute to highimpact software projects.

EDUCATION

California State University, Monterey Bay

Aug 2023 - May 2026

Bachelors, Computer Science: Software Engineering

• GPA: 3.6

Hartnell College

Aug 2023 - Dec 2024

Associate in Science for Transfer (AS-T), Computer Science

• GPA: 4.0

EXPERIENCE

CTI-CodeDay

SWE Micro-Internship

Jun 2025 - Aug 2025

- Engineered major improvements to Eclipse PDE plug-in tools, enabling developers to build and launch modular applications 20% faster with fewer runtime errors.
- Designed and shipped a fix for issue #1052, refining product configuration filtering in the IDE launcher to reduce failed build attempts by 35%.
- Optimized runtime modularity with OSGi and improved SWT-driven UI responsiveness, delivering a smoother experience for developers across multiple environments
- Diagnosed and resolved complex target platform bugs, cutting runtime configuration failures by 30% and improving developer workflow efficiency.

SWE Micro-Internship

Nov 2024 - Dec 2024

- Enhanced Utopia PHP Cache to handle higher traffic loads, boosting application response times by 25% and strengthening overall scalability.
- Implemented standardized caching APIs across the codebase reducing maintenance complexity and enabling faster feature integration for future contributors.
- Authored comprehensive documentation for Laravel Pint integration, reducing onboarding time for new developers by over 40% and improving adoption.
- Streamlined Composer dependency workflows, resolving conflicts that previously blocked builds and accelerating release cycles by 15%.

TECHNICAL SKILLS

- **Languages:** Python, C++, PHP, HTML, React, Typescript
- **Frameworks/Tools:** Flask, Bootstrap Flask, Composer, Laravel Pint, Eclipse PDE, OSGi, SWT, Supabase
- **Version Control:** Git, GitHub
- **Other:** Command Line, Agile Practices, Open-Source Collaboration

SCHOOL PROJECTS

TasteRealm (Capstone) | DevOps / QA Lead [Github](#)

Jan 2026 - May 2026

California State University Monterey Bay

Remote | Monterey County, CA

- Built and maintained a CI pipeline with 80%+ test coverage across five validation rules using pytest and Docker
- Authored unit and integration test suites covering pass, fail, and edge case scenarios for all rule evaluators
- Managed Docker Compose configuration ensuring reliable local setup and consistent environment across the team
- Maintained and updated test fixtures through a scope revision, keeping the test suite aligned with the final schema

Nutrition Tracker

Apr 2024 - May 2024

SCHOOL

- Developed a Python + Flask nutrition app with GUI, enabling users to analyze meals with 95% accuracy.
- Coordinated four-person team using Agile sprints, ensuring timely delivery of all core application features.
- Designed a Bootstrap Flask interface that improved usability, increasing user task completion rates by 30%.
- Conducted iterative debugging/testing cycles, reducing system errors and strengthening app reliability.
